

THE VAHMS™ SECURITY CLOUD

WHAT IS VAHMS™?

The VAHMS™ Security Cloud is a customizable, cost-effective video surveillance and access control system solution that is perfect for organizations of any size, and particularly, multi-building or multi-use organizations.

The cloud-based technology is a hosted management system that eliminates the need for onsite servers or inter-connectivity with multi-building or multi-use organizations. It improves security and provides peace of mind without the hassle and cost associated with administering, maintaining, and hosting an on-premise access control or video surveillance system.

MULTI-BUILDING LOGISTICS MINIMIZED

Device management between buildings can be an unnecessary challenge to the IT department. Widespread equipment can be an even greater hassle if buildings are fitted with equipment from a variety of manufacturers.

With VAHMS™, hardware inside and outside of each building is limited to IP security cameras and door control hardware.

SERVER MAINTENANCE ELIMINATED

Server maintenance and the related software has also become an unnecessary task for the IT department.

By moving the video surveillance and access control services out of the server rooms and into the VAHMS™ Security Cloud, all maintenance related to server hardware, operating systems, and software applications are performed offsite.

ADDITIONAL BENEFITS OF VAHMS™

FLEXIBILITY

Organizations can determine which features best fit their security and operational plans.

SCALABILITY

As the organization grows, whether within the same building, across the campus, or around the world, the cloud-based VAHMS™ solution removes the physical expansion limits and complexity common to on-site hardware solutions.

USER INTERFACE

The user-friendly graphical interface is perfect for eliminating a long learning curve and minimizing ongoing administrative tasks.

SITE ASSESSMENT

The solution design team performs a comprehensive site survey to uncover vulnerabilities and determine optimal hardware deployment for security coverage and building control.

TIME & MONEY SAVINGS

By eliminating the use of keys, real savings accrue: NO need for key control, NO sign out of keys, NO fear of keys being duplicated, and of course NO rekeying or master-keying entire buildings or a complete campus.

ELIMINATE MAINTENANCE

With a VAHMS™ solution, the security integrator handles all firmware and software updates. All server hardware is in the cloud. Maintenance is limited to local door hardware, which can be managed as part of the service agreement.

INSTALLATION

The solution installation team has impeccable attention to detail, ensuring system functionality while limiting disruption to normal operations.

LEARN MORE ABOUT M3T

M3T works closely with companies' administration, IT, and security teams throughout the exploration, design, installation, and ongoing maintenance of the access control and video surveillance solution.

M3T
Corporation

Beyond Security.

M3T Corporation is a veteran-owned small business that provides professional security consultation, solution design, and implementation. We understand the unique needs of our clients and provide unbiased, value-added solutions that are timely and cost-effective.

Serving PA, MD, VA, WV and DE with 3 convenient locations in Mechanicsburg, Wilmington and Tysons.
