

13 REASONS LIFE WITHOUT KEYS WOULD BE GREAT

Installing Electro-Mechanical Locks at your office or school can save you time, money and stress. M3T Corporation offers world-class security solutions and stands behind all their products.

01

Electro-Mechanical Locks allow you to conveniently get inside your business with a PIN code, fingerprint, app, remote unlock, card or key fob

Electronic locking systems cost far less than a lost master key or duplicated entry keys

02

Much harder to duplicate cards and key fobs

You will sleep much better knowing that a locksmith cannot easily cut a spare key to your building or office

03

Perfect for elderly or disabled

Elderly struggle to see and access key slots easily. With a card, they can wave their card in front of the reader and easily unlock the door

04

You can easily add new staff by coding them into the software

Departed staff can easily be deactivated in the software in case they forget to turn their card in

No need to call a locksmith and have a key cut for each new employee

05

If something goes missing from the office, you can narrow down who was there at what time

You can control who can access the office based on the day and time. Only allow certain people (cleaning company, etc.) specific days to access the building

06

Existing building access control cards can be used with your own office suite access control system

Control with any combination of card, key fob, pin or fingerprint to add multifactor authentication for increased security

07 Maintaining a card access door is less costly than constantly rekeying doors

M3T programs our doors and cardholders so all our costs for changeover are in-house support, which is covered in our monthly subscription

08 Phone app can alert you if a door is accidentally left open

Never worry about an employee leaving a door unlocked or wide open upon leaving the office

09 Unlock a door for others right at the reader

With the 'double card read' feature, you can unlock a door right at the reader so others can gain entry

10 Electronic locking ties into your intercom so you can remotely release a door

With an app on your phone, have a two-way audio and live video feed of the intercom user and release the door

11

11 Release a door remotely with Apple Watch

Software audit trail shows you what user actions were performed inside the software

12

12 Easy for one card to open multiple doors

Any card can be programmed to access an unlimited number of doors and buildings

13

13 Tracking people and visitors

All these great features with a robust audit trail and visitor badging

LEARN MORE ABOUT M3T

M3T works closely with companies' administration, IT, and security teams throughout the exploration, design, installation, and ongoing maintenance of the access control and video surveillance solution.

Beyond Security.
